2	My goldfish seems lethargic and isn't eating. What could be wrong, Dr. Fisher?	Lethargy and loss of appetite can signal a variety of issues, from poor water quality to internal parasites or even constipation. I'd recommend checking your water parameters immediately and observing for other symptoms.
3	Dr. K Fisher, how do I tell if my betta fish is stressed?	Look for clamped fins, rapid breathing, refusal to eat, hiding, or erratic swimming. Changes in color or developing white spots can also indicate stress. Ensuring a clean, appropriate-sized tank with good water quality is crucial.
4	What's the best way to introduce a new fish to an existing aquarium, according to Dr. Fisher?	Quarantine is vital! Always keep new fish in a separate tank for 4-6 weeks to monitor for diseases before introducing them to your main aquarium. Acclimate them slowly to the tank's water parameters to minimize shock.
