

How To Web Design In Html

`<h1>`, headings (`<h2>`

`<h3>` **to** `<h4>`

`<h5>`), paragraphs (`<p>`

`<br>`), lines breaks (`<br>`

`<hr>`), horizontal rules (`<hr>`), and
comments (`<!-- -->`). 4. Text

Formatting: Mastering
techniques for bolding (`<b>`, `<strong>`),
italicizing (`<i>`, `<em>`), *underlining*
(`<u>`), *and other text styling.* 5.

Links and Hypertext:
Understanding how to create

internal and external links using the `<a>` element; understanding anchor links and relative vs. absolute URLs. 6. Images and Multimedia: Adding images to your websites using the `<img>` element; specifying alt text and handling image dimensions; considering accessibility and using appropriate file formats. 7. Lists: Creating ordered lists (`<ol>`) and unordered lists (`<ul>`) to organize content effectively; understanding nested lists. 8. Tables: Designing tables using the `<table>`

and "

elements, understanding table structure and accessibility considerations, 5. Forms: Building simple forms using form elements such as
