Unlock Your Media Library: A Comprehensive Guide to Turning On Home Sharing on iTunes

Imagine this: you've just downloaded a fantastic new album or discovered a gem of a movie. Normally, you'd be limited to enjoying it on the device you originally synced it to. But what if you could effortlessly stream that same content to any other Apple device in your home? That's where iTunes Home Sharing comes in, and it's a game-changer for your personal media collection.

Home Sharing is Apple's brilliant, yet often underutilized, feature that allows you to access and play your iTunes library – music, movies, TV shows, podcasts, and even photos – on multiple

computers and devices connected to the same home network. It's like creating your own private streaming service, powered by your existing iTunes collection. No more fiddling with external hard drives or re-downloading content. Just pure, seamless entertainment, shared across your Apple ecosystem. So, how do you harness this power? Let's dive deep into how to turn on Home Sharing on iTunes and make your media accessible everywhere.

What Exactly is iTunes Home Sharing?

Before we get our hands dirty with the technical steps, it's crucial to understand what Home Sharing truly offers. At its core, Home Sharing is a network feature built into iTunes (and its successor, the Music app on newer macOS versions) that enables you to share your iTunes library across devices on your local network. Think of it as a digital bridge connecting your computers and compatible Apple devices, allowing them to "see" and stream content from a designated "host" computer where your iTunes library resides.

Key benefits include:

1. **Centralized Media Management:** Keep all your media on one main computer and access it from anywhere in your home.
2. **Seamless Streaming:** Enjoy music, movies, and more on other Macs, PCs, iPhones, iPads, and Apple TVs without needing to sync them individually.
3. **Easy Playback:** Select a library from another computer on your network and start playing instantly.
4. **No Extra Cost:** Home Sharing is a built-in feature of iTunes/Music and doesn't require any additional subscriptions or purchases.

Getting Started: Prerequisites for Home Sharing

Before you can begin the exciting process of setting up Home Sharing, ensure you have a few things in place:

1. All Devices on the Same Network

This is the absolute golden rule of Home Sharing. Every computer and Apple device you want to participate in sharing must be connected to the *exact same* Wi-Fi or Ethernet network. If one device is on a guest network or a different Wi-Fi band (e.g., 2.4GHz vs. 5GHz, if your router separates them), Home Sharing won't work. Double-check your network connections to avoid frustration.

2. A Computer with iTunes (or the Music App)

One computer will act as the "host" for your library. This is where your main iTunes library is stored. If you're on a Mac running macOS Catalina or later, you'll be using the Music app, Podcasts app, and TV app instead of a single iTunes application. The principles remain the same.

3. An Apple ID

You'll need to sign in with the same Apple ID on all devices participating in Home Sharing. This is how Apple verifies your identity and authorizes the sharing of your purchased content. If you don't have an Apple ID, you can create one for free.

4. Authorized Computers

Each computer that will be sharing or accessing the library needs to be authorized for your Apple ID. This is a security measure to ensure you're only accessing content on devices you own. You can authorize computers within iTunes/Music.

How to Turn On Home Sharing on iTunes (Windows and Older macOS)

Let's get down to the nitty-gritty. This section focuses on computers still running a version of iTunes for Windows or older macOS versions that house the full iTunes application.

Step 1: Open iTunes

Launch the iTunes application on the computer you wish to designate as the host for your library.

Step 2: Access the "Advanced" Menu

Look for the menu bar at the top of the iTunes window. Click on **"Advanced."**

Step 3: Select "Turn On Home Sharing"

In the dropdown menu under "Advanced," you'll see an option for **"Turn On Home Sharing."** Click on it.

Step 4: Sign In with Your Apple ID

A new window will pop up prompting you to enter your Apple ID and password. Use the **same** Apple ID that you use for other Apple services like the App Store or iCloud. This is crucial for Home Sharing to function correctly.

***Pro Tip:** If you're not sure about your Apple ID or password, you can reset it on Apple's website.*

Step 5: Confirm and Enable

After entering your credentials, click "**Turn On Home Sharing.**" iTunes will then process your request and enable the feature. You might see a brief confirmation message.

Step 6: Authorize Your Computer (If Necessary)

If you haven't already, you might be prompted to authorize your computer. Go to "**Account**" in the menu bar, then "**Authorizations,**" and select "**Authorize This Computer...**". Enter your Apple ID and password. This ensures your computer is linked to your Apple account and can access purchased content.

How to Turn On Home Sharing in the Music App (macOS Catalina and Later)

For users on macOS Catalina and newer, the process is slightly different as iTunes has been replaced by dedicated apps. Here's

how to set up Home Sharing using the Music app.

Step 1: Open the Music App

Launch the "**Music**" application on your Mac.

Step 2: Access Music Preferences

Go to the menu bar, click on "**Music**," and then select "**Preferences...**".

Step 3: Navigate to the "Sharing" Tab

In the Preferences window, click on the "**Sharing**" tab.

Step 4: Enable Home Sharing

You'll see an option to "**Share my library on my home network.**" Check the box next to it. This is the equivalent of "Turn On Home Sharing" in older iTunes versions.

Step 5: Sign In with Your Apple ID

Just like with iTunes, you'll be prompted to sign in with your Apple ID and password. Ensure it's the same Apple ID you use across your Apple devices.

Step 6: Click "Turn On Home Sharing"

After entering your credentials, click the "**Turn On Home Sharing**" button. Your Mac will then set up Home Sharing for your music library.

Accessing Your Shared Library on Other Devices

Now that you've enabled Home Sharing on your host computer, let's look at how to access that shared library from other devices.

On Another Mac or PC with iTunes/Music App:

1. Open iTunes or the Music app.
2. In the sidebar (you might need to enable it by going to **View > Show Sidebar**), under "Shared Libraries," you should see the name of your host computer.
3. Click on the name of your host computer.
4. You'll now see a list of your shared media categories (Music, Movies, TV Shows, etc.). Browse and play content directly from your main library.

On an iPhone or iPad:

1. Ensure your iPhone or iPad is connected to the **same** Wi-Fi network as your host computer.
2. Open the **"Settings"** app.
3. Scroll down and tap on **"Music"** (for music) or **"TV"** (for movies and TV shows).
4. Under the "Home Sharing" section, tap **"Sign In."**
5. Enter the **same** Apple ID and password you used to set up Home Sharing.
6. Now, open the Music app or TV app. You should see a "Shared" section or a "Home Sharing" option in the sidebar/library view. Tap on it to access your shared library.

On an Apple TV:

1. Make sure your Apple TV is connected to the **same** Wi-Fi network.
2. Go to "**Settings**" on your Apple TV.
3. Select "**Users and Accounts.**"
4. Choose "**Home Sharing.**"
5. Select "**Turn On Home Sharing.**"
6. Sign in with the **same** Apple ID and password.
7. Once enabled, open the "**Computers**" app (or "TV" app on newer tvOS versions) on your Apple TV. Your shared library will be available here.

Troubleshooting Common Home Sharing Issues

While Home Sharing is generally reliable, you might encounter a few hiccups. Here are some common problems and their solutions:

"I don't see the shared library."

1. **Check Network Connection:** This is the most frequent culprit. Ensure all devices are on the **exact same** Wi-Fi network.
2. **Restart Devices:** Sometimes a simple restart of iTunes, the Music app, or your Apple devices can resolve connectivity issues.
3. **Verify Apple ID:** Double-check that you're signed in with the same Apple ID on all devices participating in Home Sharing.
4. **Firewall Issues:** Your computer's firewall might be blocking Home Sharing. Check your firewall settings and ensure iTunes or the Music app is allowed to communicate on your local network.
5. **Wait a Few Minutes:** After enabling Home Sharing, it can sometimes take a minute or two for devices to discover each

other on the network.

"I can't play certain purchased content."

This usually points to authorization issues.

1. **Authorize All Computers:** On your host computer, go to **Account > Authorizations > Authorize This Computer...** and make sure it's authorized with your Apple ID. Repeat this for any other computer you're using to access the library.
2. **Check Apple ID on Device:** On the device you're trying to play from, ensure you're signed into the correct Apple ID within the Music or TV app settings.

"Home Sharing keeps turning off."

This can sometimes happen due to network instability or software glitches.

1. **Update Software:** Ensure iTunes/Music app and your Apple device operating systems are up to date.
2. **Disable and Re-enable:** Try turning off Home Sharing on the host computer, then turning it back on, and signing in again. Do the same on the client devices.

Beyond the Basics: Tips for Optimizing Home Sharing

Once you've got Home Sharing up and running, you can further enhance your experience:

1. **Organize Your Library:** A well-organized iTunes library makes

browsing shared content much easier. Use playlists, sort by artist, album, or genre.

2. **Consider Network Speed:** For seamless streaming of high-definition movies or large music libraries, a robust and stable Wi-Fi network is essential. If you're experiencing buffering, consider a wired Ethernet connection for your host computer or upgrading your router.
3. **Manage Your Media:** Home Sharing works best when your primary iTunes library is on a stable, always-on computer.
4. **Understand Purchase Restrictions:** While Home Sharing allows you to share your library, some DRM-protected content (especially older purchases) might have limitations on how many devices it can be shared with simultaneously.

By following these steps, you can transform your computer into a personal media server, making your music, movies, and more accessible on any Apple device in your home. No more syncing headaches, no more duplicate files – just effortless enjoyment. So, go ahead, set it up, and start streaming!

Turning On Home Sharing on iTunes: A Comprehensive Guide Home sharing on iTunes is a feature designed to let users distribute their digital music, audiobooks, and media libraries directly with family members and trusted friends in a secure, streamlined environment. While Apple has evolved its media distribution ecosystem over the years, enabling home sharing remains a useful tool for those who value convenient, offline access to curated collections without

relying on external cloud services or streaming subscriptions. Understanding how to activate and manage this feature ensures users can make the most of their local media assets with ease and privacy. H2: Understanding Home Sharing and Its Purpose Home sharing on iTunes allows authorized users within a personal network to access a shared music or media library stored on a connected device—such as an iPhone, iPad, or iPod Touch. Unlike public streaming platforms, this feature operates locally, meaning files remain on your Apple devices and are not uploaded to the cloud or accessible beyond your specified network. This setup supports offline listening, reduces dependency on internet connectivity, and enhances privacy, making it ideal for users who want to enjoy their curated playlists, family favorites, or rare audiobooks without sharing ownership or exposing content to broader audiences. H2: Prerequisites and Initial Setup Before activating home sharing, ensure your Apple device meets the minimum requirements: a compatible iPhone, iPad, or iPod touch running iOS 12 or later, with iTunes installed—though modern versions largely rely on Apple Music and the integrated Media app. The feature is tightly integrated with Apple’s ecosystem, so maintaining up-to-date software is essential. Begin by confirming your device is connected to the same local network as other intended sharing devices, as connectivity is the foundation of the sharing process. To initiate the setup, open the Media app, navigate to your personal library, and locate the media you wish to share. Tap the share icon—often represented by a downward arrow or three-dot menu—leading to options for sharing via AirDrop, local network, or AirPlay. Select “Share with Everyone on This Network” or a similar prompt, depending on your version. This action triggers Apple’s secure discovery protocol, enabling nearby trusted devices to detect and connect to your local library. H2: Key Insights and Technical Underpinnings At its core, home sharing leverages Apple’s AirPlay and local network protocols, encrypted to prevent unauthorized

access. Unlike cloud-based sharing, local connections bypass internet routing, reducing latency and preserving data privacy. The feature automatically manages access rights—only users on the same Wi-Fi and with valid Apple IDs in the library can stream content. This ensures that your music collection remains private, accessible only to your household, without the risks associated with third-party servers or external apps. One notable nuance is that home sharing works best with Apple Music subscriptions or purchased media stored on Apple devices, as these files are indexed and indexed through the Media library. While not natively compatible with third-party music apps, the integration with Apple's ecosystem allows seamless access to over 75 million tracks, podcasts, and audiobooks, provided they reside within your shared library.

H2: Applications and Real-World Benefits For families and roommates, home sharing simplifies media coordination—imagine loading a shared playlist for road trips, managing children's bedtime stories, or distributing podcasts without repeated downloads. It also benefits audiobook listeners who wish to rotate titles across devices without re-purchasing. Professionals or content creators can use it to share audio demos or voice recordings securely within their network. The offline capability ensures continuity, even in areas with spotty internet, making it reliable during travel or in remote locations. Beyond convenience, home sharing supports a more sustainable approach to digital media: reducing reliance on streaming servers lowers data consumption and supports lower carbon footprints, aligning with growing environmental awareness in tech usage.

H2: Future Outlook and Evolving Possibilities As Apple continues to enhance privacy and ecosystem integration, home sharing is poised to grow in functionality. Future updates may include expanded cross-device synchronization without cloud dependency, improved discovery of shared content through smart recommendations, and deeper integration with HomeKit for contextual media delivery—such as playing relaxing music when a

smart light system detects a calm atmosphere. With increasing emphasis on data privacy, Apple's focus on local, secure sharing positions home sharing as a trusted alternative to cloud-heavy models. In the coming years, this feature may become even more intuitive, requiring minimal setup while maintaining robust security. Whether for personal enjoyment, family coordination, or sustainable media habits, home sharing on iTunes remains a powerful tool for anyone seeking control over their digital library in a secure, private environment.

Unlock Your Digital Library: A Comprehensive Guide to Turning On Home Sharing on iTunes

In today's interconnected world, the ability to effortlessly share your digital media library across multiple devices within your home is no longer a luxury, but a necessity for many. Whether you're looking to stream your favorite music from your Mac to your Apple TV, access your movie collection on your iPad, or simply share your photos with family members on different computers, Apple's Home Sharing feature within iTunes (now integrated into the Music and TV apps on macOS) offers a powerful and convenient solution. This detailed, analytical guide will walk you through the intricate process of turning on Home Sharing on iTunes, ensuring you can unlock the full potential of your digital assets.

What is Home Sharing and Why Should

You Use It?

At its core, Home Sharing is a feature that allows you to access and stream your purchased iTunes content (music, movies, TV shows, podcasts, audiobooks, and even photos) from one computer to other authorized computers and devices on the same local network. Think of it as your own private, personal streaming service. This is particularly useful for households with multiple Apple devices, allowing everyone to enjoy the same content without needing to sync each device individually or rely on cloud-based services for everything.

The benefits are numerous:

1. **Centralized Media Library:** Keep all your digital media in one place on your primary computer, and access it from anywhere in your home.
2. **Effortless Streaming:** Enjoy seamless playback of music, movies, and more on any compatible device without downloading it first.
3. **Device Independence:** No need to worry about syncing or storage limitations on individual devices.
4. **Family Sharing:** Easily share your media library with family members connected to the same network.
5. **Discoverability:** Browse and play content from other Home Sharing libraries on your network.

For those looking to streamline their digital media experience, understanding how to enable and utilize Home Sharing is paramount. This guide focuses on the process for both Windows users and those on newer macOS versions where iTunes has been replaced by dedicated Music and TV apps.

Setting the Stage: Prerequisites for Home Sharing

Before diving into the setup process, ensuring you have the necessary prerequisites in place will make the experience smoother. These are generally straightforward:

1. Same Apple ID: The Cornerstone of Home Sharing

The absolute most critical requirement for Home Sharing is that all devices involved must be authorized with the same Apple ID. This Apple ID is the key that unlocks your purchased content and establishes the connection between your devices. If you have different Apple IDs for different devices, Home Sharing will not function as intended.

If you're unsure about the Apple ID associated with your devices, you can typically find it within the settings of each application (Music, TV, Books) or within the general System Settings/Preferences on your Mac or iOS device.

2. Network Connectivity: The Invisible Link

Home Sharing relies on your local network. This means all devices you wish to connect must be on the same Wi-Fi network or connected via Ethernet to the same router. A stable and reliable network connection is essential for smooth streaming and uninterrupted playback.

Ensure your Wi-Fi is functioning correctly and that all your devices are connected to the same SSID (network name).

3. Authorized Computer: The Source of Your Media

The computer hosting your iTunes library (or the Music app library on macOS) needs to be authorized with your Apple ID. This grants permission for the computer to play your purchased content and share it with other devices. This is a security measure to prevent unauthorized access to your media.

To authorize your computer (Windows): Open iTunes, go to the Account menu, then select "Authorizations" > "Authorize This Computer..." Enter your Apple ID and password.

To authorize your Mac (Music/TV apps): This is generally handled automatically when you sign in with your Apple ID to the Music or TV app. However, if you encounter issues, ensure you are signed into the relevant app with the correct Apple ID.

Enabling Home Sharing on Your Primary Computer (Windows & Older macOS Versions)

For users still running iTunes on a Windows PC or an older version of macOS, the process for enabling Home Sharing is directly within the iTunes application. This is the central hub from which your media library will be shared.

Step-by-Step: Activating Home Sharing in iTunes

1. **Open iTunes:** Launch the iTunes application on your computer.
2. **Access Preferences:**
 1. On Windows: Go to **Edit > Preferences**.
 2. On macOS: Go to **iTunes > Preferences**.
3. **Navigate to the Sharing Tab:** In the Preferences window, locate and click on the **Sharing** tab.
4. **Enable Home Sharing:** Check the box next to "**Share my library on the local network**".
5. **Turn On Home Sharing:** Click the "**Turn On Home Sharing**" button.
6. **Sign In:** You will be prompted to enter your Apple ID and password. This is the same Apple ID that you will use on your other devices.
7. **Confirm and Apply:** After entering your credentials, click "**Turn On Home Sharing**" again to confirm. Then, click "**OK**" to close the Preferences window.

Once these steps are completed, your iTunes library is now active and ready to be accessed by other devices on your network. It may take a few moments for the library to become visible to other devices.

Enabling Home Sharing on Newer macOS Versions (Music and TV Apps)

Apple has transitioned from a single iTunes application to dedicated Music and TV apps on macOS Catalina and later. The process for

enabling Home Sharing is slightly different but achieves the same outcome.

Step-by-Step: Activating Home Sharing in Music and TV Apps

1. **Open the Music App:** Launch the Music application on your Mac.
2. **Access General Preferences:** Go to **Music > Preferences** (or **General** in some macOS versions).
3. **Sign In to Your Apple ID:** Ensure you are signed in with your Apple ID within the Music app. If not, go to the **Account** menu and select **Sign In**.
4. **Enable Home Sharing:**
 1. In the Music app **Preferences**, navigate to the **General** tab.
 2. Look for the "**Home Sharing**" section and ensure the checkbox for "**Home Sharing**" is enabled.
5. **Open the TV App:** Launch the TV application on your Mac.
6. **Access General Preferences:** Go to **TV > Preferences** (or **General**).
7. **Sign In to Your Apple ID:** Similar to the Music app, ensure you are signed in with your Apple ID.
8. **Enable Home Sharing:**
 1. In the TV app **Preferences**, navigate to the **General** tab.
 2. Find the "**Home Sharing**" section and ensure the checkbox for "**Home Sharing**" is enabled.

On newer macOS versions, signing into your Apple ID within the Music and TV apps effectively enables the underlying Home Sharing functionality for your media libraries managed by these applications. You don't typically need to click a separate "Turn On Home Sharing" button as you did in the older iTunes.

Connecting Other Devices to Your Home Sharing Library

Once Home Sharing is enabled on your primary computer, the next crucial step is to connect your other Apple devices to access it. This process is generally consistent across iPhones, iPads, iPod Touches, Apple TVs, and other Macs.

Accessing Your Library on an iPhone, iPad, or iPod Touch

1. **Ensure Network Connection:** Connect your iOS device to the same Wi-Fi network as your computer with Home Sharing enabled.
2. **Open the Music App:** Launch the Music app on your iOS device.
3. **Navigate to Library:** Tap on the **Library** tab at the bottom of the screen.
4. **Select "Home Sharing":** Scroll down and tap on **Home Sharing**. You should see the name of your computer listed there.
5. **Browse and Play:** Tap on your computer's name to browse your shared music library.
6. **For Movies and TV Shows:** Open the TV app. Navigate to the **Library** tab, and you should see your shared movies and TV shows under the "Home Sharing" section.

Accessing Your Library on an Apple TV

1. **Ensure Network Connection:** Connect your Apple TV to the same Wi-Fi network.
2. **Navigate to Computers App:** On your Apple TV's Home screen, find and open the **Computers** app.

3. **Select Your Library:** You should see your computer listed as a source. Select it to access your shared library.
4. **Browse and Play:** Browse through your music, movies, and TV shows and start playback.

Accessing Your Library on Another Mac

1. **Open the Music App:** Launch the Music app on the second Mac.
2. **Navigate to Sidebar:** In the Music app, look for the sidebar. If it's not visible, go to **View > Show Sidebar**.
3. **Find "Home Sharing":** Under the "Shared Libraries" section in the sidebar, you should see the name of the Mac sharing its library.
4. **Browse and Play:** Click on the shared library name to access its contents.
5. **For Movies and TV Shows:** Open the TV app. Similar to the Music app, your shared library should appear in the sidebar under a "Home Sharing" or "Shared Libraries" section.

Troubleshooting Common Home Sharing Issues

While Home Sharing is generally reliable, you might encounter occasional hiccups. Here are some common problems and their solutions:

1. "Home Sharing Library Not Appearing"

Solution:

1. **Double-Check Apple ID:** Ensure all devices are signed in with

the **exact** same Apple ID. Even a minor difference can prevent it from working.

2. **Network Check:** Verify that all devices are connected to the same Wi-Fi network. Try restarting your router and modem.
3. **Firewall Issues:** On Windows, your firewall might be blocking iTunes. Ensure iTunes is allowed through your firewall. On macOS, check your firewall settings in System Preferences.
4. **Restart Devices:** Sometimes, a simple restart of your computer and all connected devices can resolve connectivity issues.
5. **Re-enable Home Sharing:** Try turning Home Sharing off and then back on on your primary computer.

2. "Content Not Streaming Smoothly"

Solution:

1. **Network Bandwidth:** Home Sharing uses your local network. If your network is congested or slow, streaming may stutter. Try to reduce other network activity.
2. **Wi-Fi Signal Strength:** Ensure your devices have a strong Wi-Fi signal. Move closer to your router or consider a Wi-Fi extender.
3. **Computer Performance:** If the computer hosting the library is struggling with its own processing load, it might not be able to serve media efficiently.

3. "Unable to Authorize Computer"

Solution:

1. **Correct Apple ID and Password:** Double-check that you are using the correct Apple ID and password.
2. **Check Authorization Limit:** Each Apple ID can authorize up to five computers. If you've reached this limit, you'll need to deauthorize older computers you no longer use via Account >

View My Account > Computer Authorizations.

4. "Purchased Content Not Showing"

Solution:

1. **Check App Store Purchases:** Ensure the content you're trying to access was purchased with the Apple ID associated with your Home Sharing setup.
2. **Update Apps:** Make sure your Music, TV, and iTunes apps are updated to the latest version.

Questions & Answers About how to turn on home sharing on itunes

No	Question	Answer
1	What exactly is Home Sharing on iTunes, and why would I want to use it?	Home Sharing on iTunes lets you share your music, movies, TV shows, and other purchased iTunes content with up to five authorized computers on your home network. This means you can access your library from any of those devices without having to sync them all, making it super convenient.

2	Can I turn on Home Sharing on my iPhone or iPad, or is it just for computers?	Home Sharing is primarily set up on your Mac or Windows PC via iTunes. Once enabled on your computer, you can then access that shared library from your iPhone, iPad, or iPod touch by opening the Music or TV app and navigating to the 'Shared' section.
3	I'm trying to enable Home Sharing, but I can't find the option. Where is it located in iTunes?	On a Mac, go to File > Home Sharing > Turn On Home Sharing. On a Windows PC, it's typically File > Home Sharing > Turn On Home Sharing. You might also find it under the 'Advanced' menu in some older versions of iTunes.
4	Do I need an Apple ID to use Home Sharing?	Yes, absolutely! You'll need to be signed into the <i>*same*</i> Apple ID on all computers and devices participating in Home Sharing. This is what links them together and authorizes the sharing.
5	What kind of content can I actually share using Home Sharing?	You can share purchased music, movies, TV shows, apps, books, and photos that are in your iTunes library. Content that isn't purchased from Apple (like ripped CDs or downloaded videos) might not be sharable unless you add it to your iTunes library first.
6	My friend is visiting, can they use my Home Sharing to access my iTunes library?	No, Home Sharing is designed for your personal devices within your home network and requires the same Apple ID. Friends would need to use their own Apple ID and potentially their own devices to access content.
7	I've turned on Home Sharing, but my other computer isn't showing my library. What's wrong?	First, ensure both computers are on the same Wi-Fi network. Then, confirm you're signed into the <i>*exact same Apple ID*</i> on both iTunes installations. You might also need to restart iTunes on both machines.

8	Is Home Sharing the same as AirPlay?	No, they are different. AirPlay is for streaming audio or video from one device to another (like an iPhone to an Apple TV) wirelessly. Home Sharing is for accessing your entire iTunes library from multiple authorized computers on your network.
9	Can I turn off Home Sharing if I no longer want to use it?	Yes, you can easily turn it off. Go back to the same menu where you turned it on (File > Home Sharing) and select 'Turn Off Home Sharing'.
10	What are the limitations of Home Sharing?	The main limitation is that it only works for content purchased through iTunes and requires all devices to be on the same local network and signed into the same Apple ID. It also has a limit of five authorized computers.
