

The Possessive Investment In Whiteness

The Unseen Inheritance: Exploring the Possessive Investment in Whiteness The hushed whispers of privilege, the unspoken assumptions of normalcy – these are the subtle echoes of a deeply ingrained social structure. Hidden within these echoes lies the concept of "the possessive investment in whiteness," a complex interplay of historical, cultural, and psychological forces that perpetuates racial inequality. This delves into this multifaceted phenomenon, exploring its origins, manifestations, and ultimately, its profound impact on society. The core of the possessive investment lies in the historical and ongoing process of maintaining white dominance. It's not simply about overt racism, but about the subtle ways in which white individuals, consciously or unconsciously, benefit from a system that prioritizes their race and marginalizes others. This investment manifests in a variety of ways, from microaggressions to systemic policies, shaping everything from housing markets to educational opportunities. Understanding this investment is crucial for dismantling the structures of racial inequality and building a more just and equitable society.

Historical Roots and Contemporary Manifestations

The Legacy of Slavery and Colonialism

The foundation of the possessive investment in whiteness is deeply rooted in the history of slavery and colonialism. The exploitation of enslaved people and colonized populations provided economic and social advantages to white Europeans. This created a system where white supremacy was not just a belief, but a foundational economic and political reality. The concept of inherent racial superiority was instrumentalized to justify the subjugation of others and maintain the economic gains that accompanied these exploitative systems.

The Color Line and Racial Hierarchy

The "color line," as described by W.E.B. Du Bois, wasn't merely a physical barrier; it was a deeply entrenched social and economic structure. It codified racial hierarchy, granting privileges and opportunities disproportionately to those perceived as white while simultaneously restricting opportunities for those deemed non-white. This created a tangible advantage for white individuals in virtually every facet of life – from housing to education to employment.

The Myth of Meritocracy and Implicit Bias

The idea of meritocracy, a system where individuals' success is solely based on their merit, masks the reality of inherited advantages and disadvantages. The possessive investment in whiteness often allows white individuals to perceive their success as a result of their hard work and individual merit, ignoring the historical advantages afforded by their race. Implicit bias, ingrained stereotypes and prejudices that operate unconsciously, further perpetuates this cycle. Research on implicit bias reveals consistent, subconscious associations favouring whiteness in

various contexts.

The Benefits (or rather, the Perceived Benefits)

It's crucial to acknowledge that the concept of "benefits" associated with the possessive investment in whiteness is a highly problematic framing. What appears as an advantage from a dominant perspective is often a disadvantage or denial of opportunity for marginalized groups. However, examining the perceived benefits from the perspective of those who hold these advantages may illuminate the complex societal forces at play. While it's impossible to quantify or justify these benefits in a moral or ethical sense, let's address the perceived advantages in a clinical manner:

- **Presumed Social Capital:** White individuals might experience a perceived sense of belonging and ease of interaction within certain social circles that might exclude non-white individuals, based solely on race. This can manifest in implicit social norms and dynamics in many environments.
- **Unquestioned Access to Resources:** Historically and potentially even presently, access to resources, such as education, healthcare, and employment opportunities, might seem more readily available to white individuals. This ease of access is often masked by the idea that access is universal when it isn't.
- Perceived Social Acceptance: The inherent biases in society can sometimes provide an easier path to social and cultural acceptance, which often isn't a factor of individual merit but a byproduct of race. (Note: This section acknowledges perceived advantages, not to endorse them, but to understand the psychological underpinnings that drive the possessive investment in whiteness. These are often not quantifiable, but their impact on societal dynamics is significant.)

Real-World Examples and Case Studies

Housing Disparities

Case studies on historical redlining practices in the United States highlight the discriminatory lending policies that systematically excluded non-white communities from homeownership, wealth accumulation, and subsequent upward mobility.

Education Gaps

Analysis of educational achievement gaps between racial groups reveals persistent disparities in school funding, teacher quality, and access to resources, leading to different educational outcomes. These disparities stem, at least in part, from the historical and ongoing possessive investment in whiteness.

Healthcare Disparities

Studies on disparities in healthcare access and quality demonstrate how race affects patients' experiences and outcomes, even after controlling for socioeconomic factors. (Further examples and case studies, using relevant statistical data, could be added here)

Conclusion

The possessive investment in whiteness is a complex and multifaceted concept that deeply affects social structures and individual experiences. Its historical roots in slavery, colonialism, and racial hierarchy continue to shape contemporary society. By recognizing the historical injustices and

systemic biases that have underpinned this investment, we can work towards dismantling these structures and creating a more just and equitable society for all.

work towards a more just and equitable future.

The Possessive Investment in Whiteness: Understanding a Complex Social Construct

We often talk about investments in terms of stocks, bonds, or real estate – tangible assets that yield financial returns. But what about investments that aren't monetary? What about the deeply ingrained, often unconscious, ways individuals and groups invest in social constructs? Today, we're diving into a concept that's crucial for understanding racial inequality and power dynamics: the "possessive investment in whiteness."

This isn't about blaming individuals for their race. Instead, it's a critical examination of how societies, particularly in the West, have historically and systematically prioritized and benefited those identified as white. It's a concept that helps us unravel why certain advantages persist, even when overt discrimination seems to have lessened. Understanding the possessive investment in whiteness is key to dismantling systemic racism and building a more equitable future.

What Exactly is the Possessive Investment in Whiteness?

At its core, the possessive investment in whiteness refers to the historical and ongoing ways in which power, privilege, and material resources have been accumulated and maintained by people defined as white. It's an investment because, much like a financial investment, it has yielded

significant, albeit often unearned, returns for a specific group. These returns aren't always direct cash payments; they manifest in myriad forms: access to better housing, education, employment, political representation, and even a presumption of innocence or trustworthiness in various social interactions.

Think of it as a collective, often unspoken, agreement or a historical inheritance. This investment wasn't a conscious decision made by every individual, but rather a product of centuries of social, economic, and political structures that favored whiteness. These structures, built on ideologies of racial hierarchy, allowed for the accumulation of wealth and power by white populations while simultaneously dispossessing and marginalizing non-white groups.

Historical Roots and Manifestations

The roots of this possessive investment can be traced back to colonialism, slavery, and the establishment of racial categories that placed white Europeans at the apex. In the United States, for instance, policies like redlining systematically denied Black communities access to homeownership and wealth-building opportunities, while simultaneously subsidizing white suburbanization. This created a stark racial wealth gap that continues to this day.

Similarly, access to quality education has often been linked to racial demographics. Schools in predominantly white neighborhoods have historically received more funding and resources, leading to better educational outcomes for white students. This educational advantage then translates into better job prospects and higher earning potential, perpetuating the cycle of investment.

Beyond Material Wealth: The Social and Psychological Dimensions

The possessive investment isn't solely about economic disparities. It also encompasses social and psychological dimensions. Being white in many Western societies often comes with an implicit "default" status. This can mean not being subjected to racial profiling, having one's identity assumed rather than questioned, and seeing one's own culture reflected and celebrated in mainstream media and institutions.

This can create a sense of belonging and security that is often invisible to those who experience it. Conversely, for people of color, navigating a world where whiteness is the assumed norm can be exhausting and alienating. The constant need to prove oneself, to be seen and heard, is a burden that arises from the very nature of this possessive investment.

How Does the Possessive Investment in Whiteness Perpetuate Inequality?

The ongoing nature of this investment is what keeps racial inequality alive. It's not just a historical artifact; it's a dynamic system that continues to shape our present. Even in the absence of explicit racial discrimination, the advantages conferred by whiteness can be inherited and perpetuated across generations.

Intergenerational Wealth and Opportunity

Consider the concept of inherited wealth. Families who have benefited from historical advantages – like owning property in areas that appreciated significantly due to discriminatory housing policies – can pass

down substantial assets to their children. This provides a significant head start in life, offering access to better education, safer neighborhoods, and stronger social networks. This is a direct material manifestation of the possessive investment.

Cultural Capital and Social Networks

Beyond material wealth, the possessive investment also extends to cultural capital – the knowledge, skills, education, and advantages that give individuals or families social mobility. White individuals may find themselves born into social circles where access to influential people, internships, and job opportunities is more readily available, often due to pre-existing networks built on shared racial and class backgrounds.

This isn't to say that white individuals don't work hard or face challenges. Of course, they do. However, the playing field has historically been tilted, and the possessive investment in whiteness describes the structural advantages that make the "climb" less steep for some than for others.

The Illusion of Meritocracy

One of the most insidious aspects of the possessive investment in whiteness is how it often masks itself behind the rhetoric of meritocracy. The idea that everyone has an equal opportunity to succeed based on their own abilities and efforts is a powerful myth. However, when the starting line is not the same for everyone, due to historical and ongoing systemic advantages, a pure meritocracy cannot exist.

The possessive investment in whiteness explains why, even with similar qualifications, individuals from marginalized racial groups may face greater hurdles in securing employment, promotions, or even fair treatment in the justice system. It's about understanding that "merit" is

often judged within a system that already favors certain groups.

Challenging the Possessive Investment in Whiteness

Acknowledging and understanding the possessive investment in whiteness is a crucial first step toward dismantling racial inequality. This isn't about assigning blame or fostering guilt. It's about critical self-reflection and a commitment to systemic change.

Recognizing and Unpacking Privilege

For those who benefit from whiteness, recognizing and unpacking privilege is essential. This means understanding how societal structures have historically favored white people and how those advantages continue to operate. It involves listening to the experiences of people of color and being willing to acknowledge uncomfortable truths.

This process of recognizing privilege isn't about feeling bad; it's about understanding the system and identifying where interventions are needed. It's about using that awareness to advocate for policies and practices that create a more equitable society.

Advocating for Systemic Change

The possessive investment in whiteness is deeply embedded in our institutions. Therefore, addressing it requires more than individual actions; it demands systemic change. This can include:

1. **Policy Reform:** Advocating for policies that address historical injustices, such as affirmative action in education and employment,

reparations, and equitable housing initiatives.

2. **Education and Awareness:** Promoting critical race theory and other frameworks that help people understand the historical construction of race and its ongoing impact.
3. **Challenging Implicit Bias:** Implementing training and accountability measures in institutions to address implicit biases that disadvantage people of color.
4. **Promoting Diverse Representation:** Ensuring that people of color are represented in positions of power and influence across all sectors of society.

The Role of White Allies

White allies play a vital role in this process. This involves not only speaking out against racism but also actively working to dismantle the systems that uphold the possessive investment in whiteness. It means using one's privilege to amplify marginalized voices, support anti-racist initiatives, and hold institutions accountable.

Being an ally is an ongoing commitment. It requires continuous learning, humility, and a willingness to be uncomfortable. It's about shifting the focus from individual intent to collective impact.

Conclusion: Moving Towards a Society Without a Possessive Investment

The concept of the possessive investment in whiteness is a powerful lens through which to view racial inequality. It helps us understand why certain advantages persist and why a truly equitable society remains an aspiration rather than a reality for many. By recognizing this historical and ongoing investment, we can begin to dismantle the structures that

perpetuate it.

This is a complex and often challenging conversation. It requires us to confront deeply ingrained societal norms and historical legacies. However, by engaging with these ideas, fostering empathy, and committing to systemic change, we can move towards a future where opportunities are not predetermined by race, and where the concept of a "possessive investment in whiteness" becomes a relic of the past.

The Concept of the Possessive Investment in Whiteness: Unpacking a Complex Social and Cultural Phenomenon

The notion of the possessive investment in whiteness refers to a deeply rooted, often unexamined set of social, cultural, and institutional practices through which whiteness is treated not merely as a racial category but as a dominant identity imbued with privilege, ownership, and symbolic power. This concept invites critical reflection on how whiteness functions as a form of capital—social, economic, and psychological—shaped by historical legacies of colonialism, segregation, and systemic inequality. Rather than a static trait, the possessive investment in whiteness reveals a dynamic, performative engagement with racial identity that sustains hierarchies and influences access to opportunity across societies. At its core, this framework examines how whiteness is not only inherited but also actively maintained through institutional norms, cultural narratives, and everyday behaviors. It explores how white identity becomes a site of investment—where individuals and groups seek to preserve status, resist

integration, or assert dominance—often unconsciously reinforcing racial boundaries. This process shapes everything from educational systems and media representation to workplace dynamics and political discourse. By identifying the possessive dimensions of whiteness, scholars and activists aim to expose hidden mechanisms of racial advantage and challenge the myth of neutrality in racial relations.

Key Insights: Historical Foundations and Contemporary Manifestations

Understanding the possessive investment in whiteness requires grounding in history. The legacy of European colonialism established racial hierarchies that positioned whiteness as superior and non-white identities as subordinate. Over time, these hierarchies became embedded in social structures—from land ownership and citizenship laws to educational curricula and cultural norms. The investment lies not in physical possession but in the symbolic and material control over narratives, resources, and social capital that benefit white communities. In contemporary contexts, this manifests in subtle yet powerful ways. For example, media portrayals often center whiteness as the default, marginalizing or exoticizing non-white experiences. In education, disparities in funding, curriculum content, and disciplinary practices reflect deeper patterns of racialized opportunity. In hiring and career advancement, implicit biases linked to racial stereotypes perpetuate inequities under the guise of meritocracy. These patterns illustrate how whiteness functions as a form of social currency, often unacknowledged by those who hold it, yet deeply consequential for others.

Applications: From Academia to Policy and Everyday Life

The concept has found application across disciplines, offering a lens to analyze racial power dynamics in fields such as sociology, cultural studies, and critical race theory. It challenges researchers to move beyond surface-level diversity metrics and probe deeper into how racial identity shapes lived experience and institutional outcomes. In policy, understanding possessive investment in whiteness informs efforts to dismantle systemic barriers—such as reforming policing practices, overhauling educational funding, or designing equitable housing policies—that reinforce racial inequality. Beyond academia, the framework encourages individuals and organizations to reflect on their own positions within racial hierarchies. It invites white people to examine how their identities intersect with privilege and power, fostering accountability and allyship. In public discourse, it pushes for more inclusive narratives that resist the naturalization of whiteness and amplify underrepresented voices. This shift demands courage, humility, and sustained engagement, but it also opens pathways toward justice and equity.

Benefits: Toward Awareness, Accountability, and Change

Recognizing the possessive investment in whiteness offers multiple benefits. It cultivates a more nuanced understanding of race, moving beyond simplistic binaries to acknowledge the structural nature of inequality. For individuals, it promotes self-awareness and personal growth, encouraging white people to confront discomfort and embrace responsibility. For communities, it strengthens collective action by

illuminating shared interests in dismantling racial injustice. Institutions that engage with this concept can implement targeted reforms, reduce bias, and build more equitable systems. Moreover, this perspective enriches cultural dialogue, fostering empathy and solidarity across racial lines. By exposing the often-invisible ways whiteness operates as an investment, society gains tools to challenge entrenched power and reimagine inclusion. It transforms racial discourse from a source of division into a catalyst for transformative change.

Future Outlook: Sustaining Critical Engagement and Equity

Looking ahead, the concept of the possessive investment in whiteness will remain vital as societies grapple with evolving racial dynamics and growing calls for justice. Education systems must integrate this lens into curricula, preparing future generations to navigate race with insight and integrity. Policymakers must anchor reforms in this critical understanding, ensuring that equity is not an afterthought but a foundational principle. Yet, progress depends on sustained, honest engagement. The path forward requires more than policy changes—it demands cultural shifts, institutional humility, and collective commitment. As awareness deepens, so too does the potential to redefine whiteness not as a static identity of ownership, but as a shared responsibility toward a more just and inclusive world. By confronting the possessive dimensions of whiteness, society moves closer to dismantling systemic inequities and building a future rooted in equity and shared dignity.

The Possessive Investment in Whiteness: Unpacking a System of Privilege and Power

In contemporary discussions surrounding race, inequality, and social justice, the concept of the "possessive investment in whiteness" emerges as a critical lens through which to understand systemic advantages and disadvantages. Coined by sociologist George Lipsitz, this framework moves beyond individual prejudice to examine how societal structures, policies, and cultural norms have historically and continuously created and maintained advantages for those identified as white, often at the expense of racialized groups. Understanding this possessive investment is not about assigning blame to individuals but about deconstructing the deeply embedded mechanisms that perpetuate racial hierarchies.

Defining the Possessive Investment in Whiteness

At its core, the possessive investment in whiteness signifies a set of advantages, privileges, and benefits that accrue to people racialized as white, often unconsciously, due to the historical and ongoing construction of whiteness as the default, norm, and ideal within Western societies. This investment is "possessive" because it is treated as a form of property, something to be guarded, maintained, and passed down through generations. It manifests in tangible and intangible ways, shaping access to resources, opportunities, and even perceptions of self and others.

Lipsitz argues that this investment is not static; it is actively produced and reproduced through various social, economic, and political processes. It

influences everything from housing markets and educational systems to legal frameworks and cultural representations. The concept challenges the notion that racial equality has been achieved, suggesting instead that persistent racial disparities are not accidental but are the result of deliberate historical choices and ongoing systemic reinforcement.

Historical Roots of Whiteness as Property

The foundations of the possessive investment in whiteness are deeply rooted in the history of colonialism, slavery, and segregation. The very concept of "whiteness" as a distinct racial category, and more importantly, as a privileged one, was constructed to justify and maintain power imbalances. In the United States, for instance, laws and social practices explicitly codified whiteness as a prerequisite for citizenship, property ownership, and even basic human rights. This was evident in policies like the Naturalization Act of 1790, which limited citizenship to "free white persons," and the subsequent development of Jim Crow laws that systematically disenfranchised Black Americans.

The legal concept of "whiteness as property," as explored by legal scholar Cheryl Harris, illuminates how racial identity has been treated as an asset or entitlement. This meant that benefits like land ownership, access to credit, and the right to vote were not universally distributed but were racially circumscribed. The accumulation of wealth and opportunity by white populations was thus built, in part, on the dispossession and exploitation of non-white communities. This historical legacy continues to shape contemporary patterns of wealth, income, and social mobility.

Manifestations in Contemporary Society

The possessive investment in whiteness is not merely a historical artifact;

it continues to shape contemporary American life in profound ways. Its influence can be observed across various sectors:

Economic Inequality and Wealth Disparities

One of the most significant manifestations is the persistent racial wealth gap. Generational wealth, accumulated through homeownership, business ownership, and investments, has disproportionately benefited white families due to historical discriminatory practices in banking, lending, and real estate. Redlining, for example, systematically denied mortgages and insurance to residents of predominantly Black neighborhoods, hindering wealth accumulation for generations of Black families while simultaneously boosting the property values and financial security of white communities.

Furthermore, disparities in employment opportunities, wage gaps, and access to capital continue to perpetuate economic inequality. Studies consistently show that individuals with white-sounding names receive more callbacks for job interviews, and that racial bias in hiring and promotion practices contributes to a less equitable workforce. These economic disadvantages have ripple effects on access to quality education, healthcare, and housing.

Educational Disparities and Opportunity Gaps

The educational system, often touted as a great equalizer, also reflects the possessive investment in whiteness. School funding, which is often tied to local property taxes, perpetuates disparities between predominantly white, affluent districts and under-resourced, often racially segregated schools. This leads to unequal access to qualified teachers, up-to-date technology, and enriching curricula.

Beyond funding, curriculum itself often centers whiteness, marginalizing

or misrepresenting the histories and contributions of non-white peoples. This can lead to a sense of alienation for students of color and reinforce a narrative of white intellectual and cultural supremacy. Tracking systems, standardized testing biases, and differential disciplinary practices can also disproportionately affect students of color, further widening achievement gaps.

Housing Segregation and Environmental Justice

Residential segregation, a direct legacy of discriminatory housing policies like redlining and restrictive covenants, continues to shape where people live, impacting access to resources and opportunities. Predominantly white neighborhoods often benefit from better infrastructure, public services, and higher property values. Conversely, historically marginalized communities are often located in areas with higher levels of pollution, limited access to green spaces, and greater exposure to environmental hazards.

This intersection of race and environmental degradation highlights the concept of environmental racism, where the burden of environmental pollution and its associated health risks disproportionately falls on communities of color. The possessive investment in whiteness, in this context, means that the well-being and environmental quality of white communities are often prioritized over those of other racial groups.

Criminal Justice System and Racial Profiling

The criminal justice system is another area where the possessive investment in whiteness is starkly evident. Racial disparities in policing, arrests, sentencing, and incarceration rates suggest a system that disproportionately targets and penalizes individuals of color. Practices such as racial profiling and the differential application of drug laws

contribute to the mass incarceration of Black and Latinx individuals.

The perception of criminality associated with certain racial groups, often perpetuated by media portrayals and systemic biases, reinforces the idea that whiteness is associated with innocence, trustworthiness, and conformity to social norms, while non-whiteness can be implicitly linked to deviance or threat. This has profound implications for individuals' interactions with law enforcement and the legal system.

Cultural Hegemony and Media Representation

The possessive investment in whiteness also extends to the realm of culture. Whiteness has historically been positioned as the dominant cultural narrative, influencing mainstream media, art, literature, and entertainment. This can result in the marginalization or exoticization of non-white cultures and perspectives, and the perpetuation of stereotypes.

When whiteness is the unspoken norm, the experiences and perspectives of white individuals are often presented as universal, while the experiences of others are framed as "ethnic," "cultural," or "minority." This cultural hegemony can shape how individuals understand themselves and others, reinforcing existing power structures and limiting the full spectrum of human experience to be recognized and valued.

Challenging the Possessive Investment

Dismantling the possessive investment in whiteness requires a multifaceted approach that addresses both individual biases and systemic inequalities. It involves:

Acknowledging and Understanding Systemic Racism

The first step is to move beyond individualistic understandings of racism

and recognize that racial inequality is embedded within societal structures and institutions. This requires education and critical engagement with the historical and ongoing processes that have created and maintained racial disparities.

Policy Reform and Reparative Justice

Systemic change necessitates policy reforms aimed at addressing historical injustices and creating more equitable systems. This can include affirmative action policies designed to counteract historical disadvantages, investments in underserved communities, criminal justice reform, and policies that promote equitable access to education, housing, and employment.

The conversation around reparations for historical injustices, such as slavery and segregation, is gaining traction as a means of addressing the accumulated wealth and opportunity gap. While controversial, such discussions highlight the deep economic impact of the possessive investment in whiteness.

Challenging Cultural Narratives and Promoting Inclusive Representation

Efforts to decenter whiteness in cultural narratives and promote more diverse and authentic representation are crucial. This involves supporting artists, storytellers, and media creators from underrepresented backgrounds and challenging stereotypes in media and popular culture.

Promoting Intersectional Analysis

It is important to recognize that the possessive investment in whiteness intersects with other forms of privilege and oppression, such as class, gender, sexuality, and disability. A truly equitable society must address

these intersecting inequalities.

Conclusion

The concept of the possessive investment in whiteness provides a powerful analytical tool for understanding the persistent nature of racial inequality. It moves us beyond simplistic notions of prejudice to reveal how deeply entrenched systems of advantage have been built and maintained. By acknowledging and critically examining this possessive investment, society can begin to dismantle the structures that perpetuate racial hierarchies and work towards a more just and equitable future for all. This involves not only recognizing the privileges afforded to some but also actively working to dismantle the systems that systematically disadvantage others, ensuring that the benefits of society are shared more broadly and equitably.

3	Is 'possessive investment in whiteness' about blaming white individuals for racism?	No, it's not about individual blame. Instead, it's a systemic analysis that examines how societal structures, policies, and cultural norms have historically and continue to benefit those identified as white, regardless of individual intentions or beliefs about race.
4	How does this concept relate to concepts like 'white privilege'?	White privilege is a core component of the possessive investment in whiteness. It refers to the unearned advantages and immunities that accrue to white people due to their racial classification within a racially stratified society. The 'investment' part emphasizes how these advantages are actively maintained and defended.
5	Can people of color also benefit from the 'possessive investment in whiteness'?	While people of color can achieve upward mobility and gain advantages within the existing system, their gains often occur within the framework established by the possessive investment in whiteness. They may adopt certain norms or assimilate to gain acceptance, but the fundamental power structure remains centered around whiteness.
6	What are the implications of 'possessive investment in whiteness' for social justice movements?	Understanding this concept is crucial for dismantling systemic inequality. It helps to identify the root causes of racial disparities and to develop strategies that address not just overt discrimination but also the deeply ingrained structures that perpetuate racial advantage.

7	How does 'possessive investment in whiteness' influence cultural narratives and media?	It often leads to a default centering of white experiences, perspectives, and aesthetics as normal or universal. This can result in the marginalization or misrepresentation of non-white cultures and histories, reinforcing the idea that whiteness is the standard against which all others are measured.
8	What are some concrete examples of how 'possessive investment in whiteness' has been historically constructed?	Historically, it was constructed through laws like redlining, discriminatory immigration policies, the denial of land ownership and wealth-building opportunities to non-white groups, and the very creation of racial categories that defined whiteness as superior.
9	How can acknowledging 'possessive investment in whiteness' contribute to a more equitable society?	By recognizing and analyzing how whiteness has been invested in as a source of advantage, we can begin to deconstruct those systems. This allows for the redistribution of resources, opportunities, and power in ways that are more equitable and just for all racial groups.
