A Sample Puzzle to Get Started

Let's try a simple one suitable for ages 7-9:

Puzzle: The Farmer's Animals

A farmer has chickens and sheep. If you count all the heads, there are 15. If you count all the legs, there are 40. How many chickens and how many sheep does the farmer have?

Hint: Chickens have 2 legs, and sheep have 4 legs. Think about how you can use this information.

Answer:

Let C be the number of chickens and S be the number of sheep.

Heads: $C + S = 15$

Legs: $2C + 4S = 40$

If we assume all 15 animals were chickens, that would be $15 * 2 = 30$ legs. We have 40 legs, so there's a difference of 10 legs.

Each sheep has 2 more legs than a chicken ($4 - 2 = 2$). So, to account for the extra 10 legs, we need $10 / 2 = 5$ sheep.

If there are 5 sheep, then there are $15 - 5 = 10$ chickens.

Check: 10 chickens (20 legs) + 5 sheep (20 legs) = 40 legs. 10 heads + 5 heads = 15 heads. Correct!

The farmer has 10 chickens and 5 sheep.

This type of [math riddle for elementary students](#) encourages systematic thinking and the application of basic algebraic concepts without explicit equations.
