

Welcome to my website!

• The `DOCTYPE` declares the document type, `<html>` is the root element, `<head>` contains meta-information (like the title), and `<body>` holds all the visible content.²

Semantic HTML uses tags that describe their meaning, like `<h1>`

γ_1 , γ_2 ,
 γ_3 , γ_4 ,
 γ_5 , γ_6 ,
 γ_7 , and γ_8

- This improves accessibility, SEO, and makes your code easier to understand and maintain compared to generic `<div>` tags.³

I want to add images and links to my website. How do I do that

in HTML?	Build a website with html	1
For images, use the `` tag with the `alt` attribute for descriptive text (essential for accessibility). For links, use the `` tag with the `href` attribute for the URL.		

Can I make my website look good with just HTML, or do I need other technologies?

HTML provides the structure and content. To make it visually appealing, you'll need CSS (Cascading Style Sheets). HTML defines **what** goes on the page, and CSS defines **how** it looks (colors, fonts, layout, etc.).

5What's the difference between `

` and `

` tags, and how should I use them?`

` through `

` represent heading levels. `

` is the most important and

should be used for the main title of your page. Subsequent headings (

, , ,

, etc.) denote sub-sections in a hierarchical order. Use them logically for content organization.⁶

How do I create lists in HTML? Are there different types?

Yes, there are two main types: unordered lists (

) for bullet points and ordered lists (

) for numbered lists. Both use the

1. `<li>` tag for individual list items within them.⁷

I've heard of HTML forms. What are they

used for, and what are some basic tags involved?

© cloud1

with html

HTML forms are used to collect user input. Key tags include

``` to enclose the form elements, ```` for user-friendly descriptions of input fields, and input types like ```` for text, ```` for submission buttons, and ```
