Section 4: Basic Mathematics and Mechanical Aptitude Sample Questions

Practical math and mechanical reasoning are often included.

1. **Question Type:** Word Problem

2. **Example:** A sanitation truck collected 5 tons of garbage in the morning and 7.5 tons in the afternoon. If the truck's capacity is 10 tons, how much more garbage could it have carried in total? **Answer:** 2.5 tons. (Calculation: $5 \text{ tons} + 7.5 \text{ tons} = 12.5 \text{ tons}$ collected. $12.5 \text{ tons} - 10 \text{ tons} = 2.5 \text{ tons}$ over capacity, meaning it could have carried 2.5 tons more if capacity allowed for the full collection.) *Correction:* The question asks how much *more* it could have carried *in total*. The total collected was 12.5 tons. If capacity was 10 tons, this implies an overload. A better phrasing for a capacity question: "A sanitation truck has a capacity of 10 tons. If it has collected 4 tons and needs to pick up another 7 tons, will it exceed its capacity?" (Answer: Yes). Or, "A sanitation truck collected 5 tons of garbage. The next stop will add 3 tons, and the final stop will add 4 tons. If the truck's capacity is 10 tons, will it be overloaded?" (Answer: Yes, $5 + 3 + 4 = 12 \text{ tons}$). Let's rephrase the example to be clearer: **Example (Revised):** A sanitation truck collected 4 tons of waste. The next stop is expected to add 3 tons, and the final stop is expected to add 5 tons. If the truck's maximum capacity is 10 tons, how much capacity will be remaining after the final stop? **Answer:** -2 tons (meaning it will be overloaded by 2 tons). (Calculation: $4 + 3 + 5 = 12 \text{ tons}$ collected. $10 \text{ tons capacity} - 12 \text{ tons collected} = -2 \text{ tons remaining capacity}$.) *Self-correction for clarity:* The question is often about capacity. Let's re-frame again for typical exam logic. **Example (Re-revised for typical exam logic):** A sanitation truck collected 4 tons of waste. The next stop is expected to add 3 tons, and the final stop is expected to add 2 tons. If the truck's maximum capacity is 10 tons, how much capacity will be remaining after the final stop? **Answer:** 1 ton. (Calculation: $4 + 3 + 2 = 9 \text{ tons}$ collected. $10 \text{ tons capacity} - 9 \text{ tons collected} = 1 \text{ ton remaining capacity}$.)

1. **Question Type:** Mechanical Aptitude
2. **Example:** If a large gear turns clockwise, what direction will a smaller gear directly meshed with it turn? **Answer:** Counter-clockwise.
(Rationale: Meshed gears rotate in opposite directions.)
